一、入门

💡 Important

SpringBoot是Pivotal团队开发的全新框架，旨在简化Spring应用的初始搭建及开发过程。

1.入门案例

1.1 项目信息

- 入门案例地址：[springboot-quickstart](#)
- IntelliJ IDEA版本：2024.2.1

1.2 开发步骤

Step1: 创建新工程，在左侧栏目选择 `Spring Boot`，右侧指定工程相关基础信息：

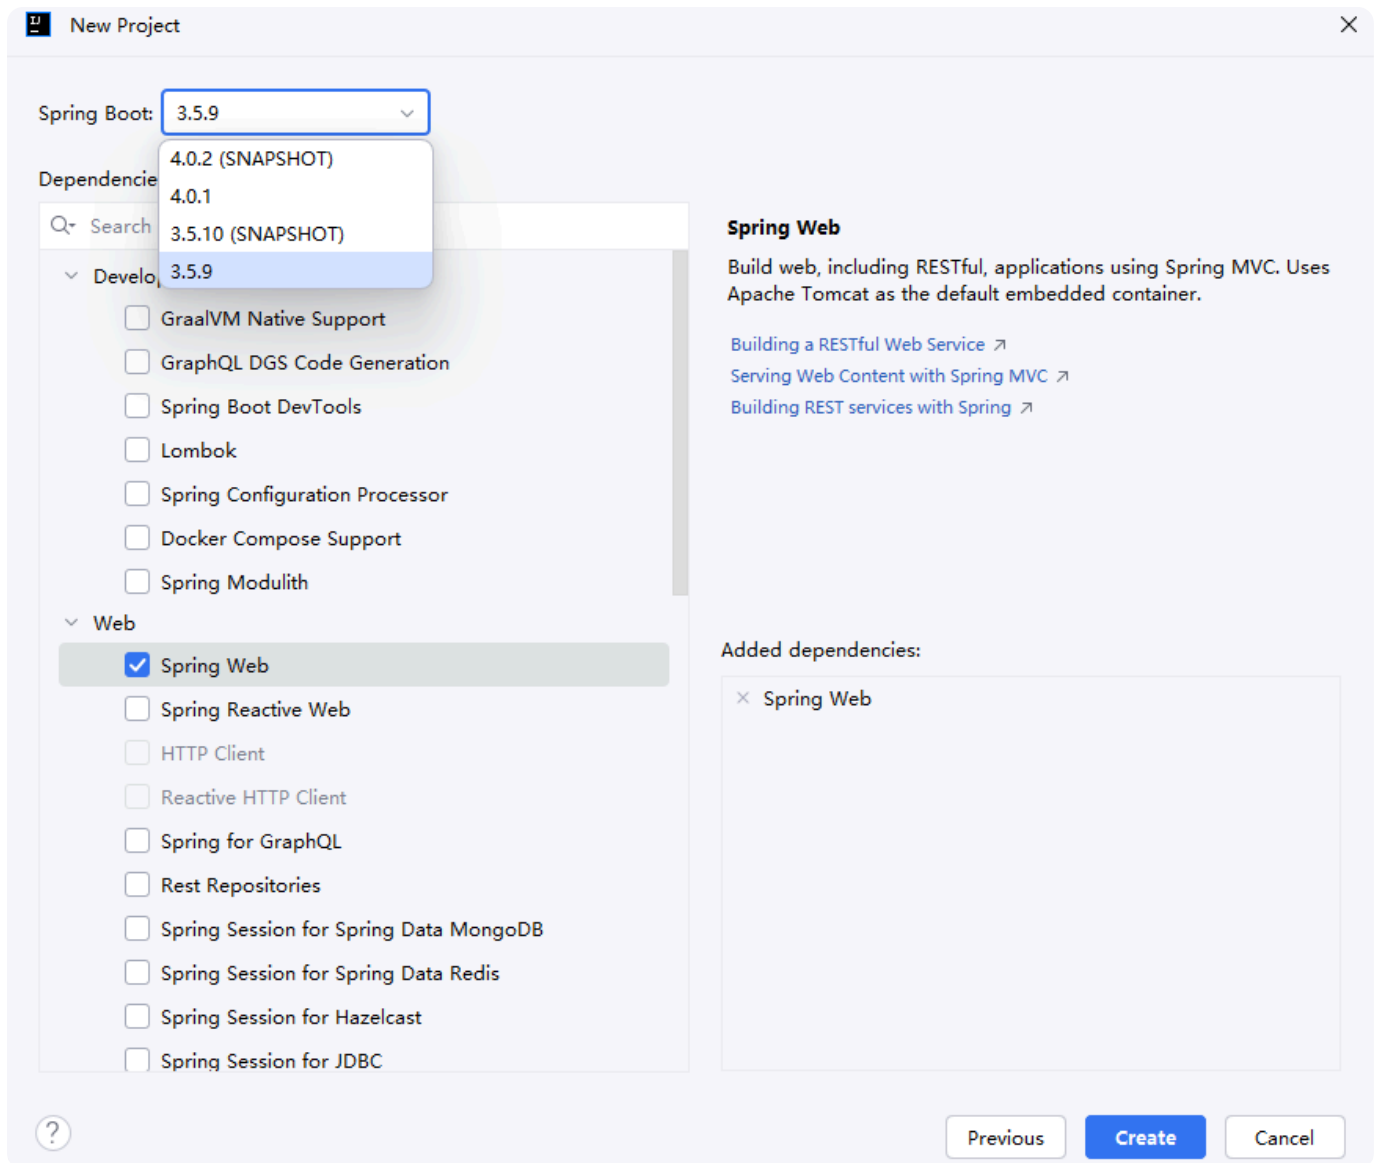

- `Name` 和 `Location` 自定义。
- `Type` 要选择 `Maven`。
- `Package name` 修改为 `com.zsh`。
- `Packaging` 选择 `Jar` 即可。

The screenshot shows the 'New Project' dialog box. On the left, under 'Generators', 'Spring Boot' is selected. The right panel contains the following fields and options:

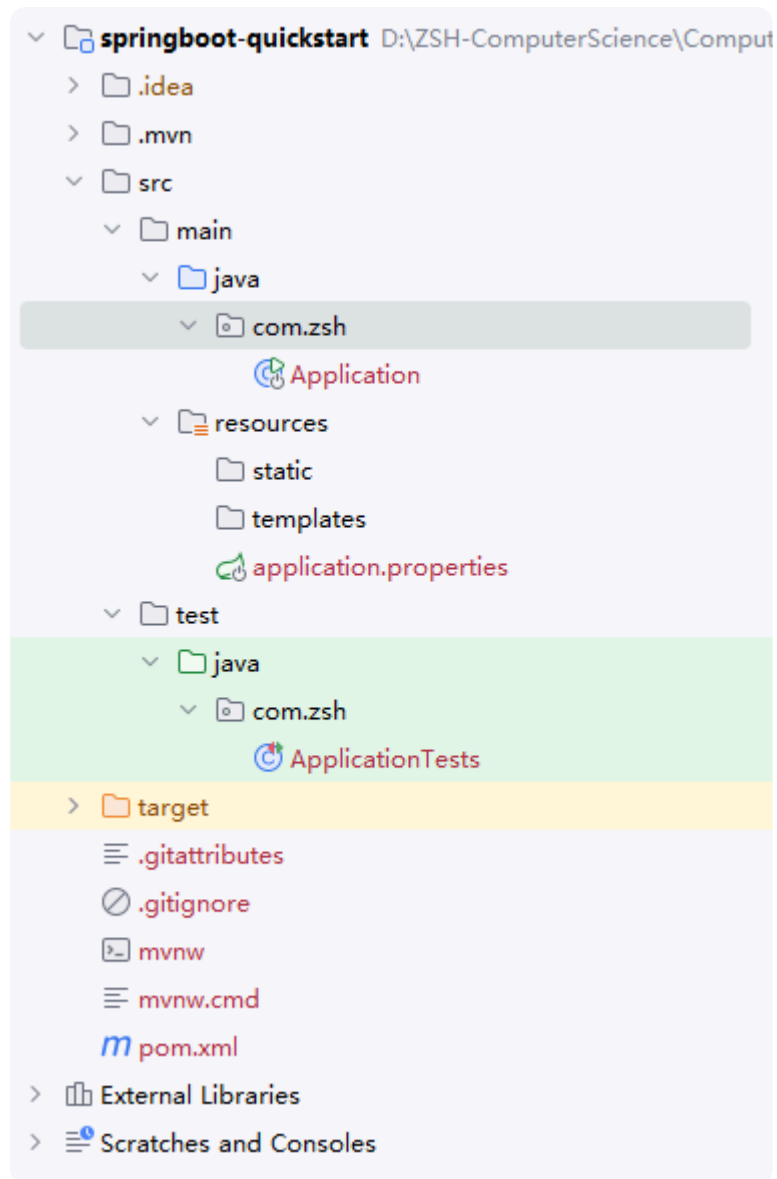

- Server URL: `start.spring.io`
- Name: `demo`
- Location: `D:\ZSH-ComputerScience\ComputerNotes\SpringBoot`
- Project will be created in: `D:\ZSH-ComputerScience\ComputerNotes\SpringBoot\`
- ☐ Create Git repository
- Language: `Java` (selected), `Kotlin`, `Groovy`
- Type: `Gradle - Groovy`, `Gradle - Kotlin`, `Maven` (selected)
- Group: `com.zsh`
- Artifact: `demo`
- Package name: `com.zsh`
- JDK: `corretto-17 Amazon Corretto 17.0.12` (selected)
- Java: `17` (selected)
- Packaging: `Jar` (selected), `War`

At the bottom right, there are 'Next' and 'Cancel' buttons.

Step2: 选择 `Spring Boot` 版本，勾选项目需要的技术栈，此处为 `Dependencies-Web-Spring Web`。

Step3: 点击 **Create** 创建工程，可得如下项目结构。

Step4: 在 `src/main/java/com.zsh` 下新建 `controller` 包，开发控制器类 `BookController`。

```
1 package com.zsh.controller;
2
3 import org.springframework.web.bind.annotation.*;
4
5 @RestController
6 @RequestMapping("/books")
7 public class BookController {
8
9     @GetMapping("/{id}")
10    public String getById(@PathVariable Integer id) {
11        System.out.println("id ==> " + id);
12        return "hello springboot";
13    }
14 }
```

Step5: 假如8080端口已被占用, 则修改 `src/main/resources` 下的 `application.properties` 文件, 修改 `Tomcat` 的默认端口, 此处我改为8082。

```
1 spring.application.name=springboot-quickstart
2 server.port=8082
```

Step5: 启动系统自动生成的 `Application` 类, 入门案例开发完毕。

```
C:\Users\asus\.jdk\corretto-17.0.12\bin\java.exe ...
```
